Professional Traffic Collision Reconstruction, Analysis, and Training

Crash Data Retrieval Tool Technician Certification Course

Dates:

August 24th & 25th, 2017

Location:

North Las Vegas PD.

2250 Las Vegas Bl. North, North Las Vegas, NV 89030

The two-day CDR Tool Technician course is designed to introduce the investigator to the Bosch CDR Tool, latest software updates, basic imaging techniques, preserving the data, and troubleshooting. It will provide a working understanding of the components necessary for imaging and preserving data from the latest supported vehicle manufacturers.

The course includes the latest updates and practical hands-on experience in imaging data from all 3 types of supported modules and the latest information from the OEMs. The student receives expert instruction in best practices and practical applications in troubleshooting in-vehicle DLC data imaging, practical adapter applications, and “Re-Powering” in-vehicle components to enable safe data imaging.

A CDR kit and activated software are suggested, but not required. It is best to train with the tools that you will be deploying to ensure they are communicating and operating correctly. Some students may be traveling and it is difficult to transport the large CDR tool kit components, so students may be asked to share some cables and adapters during class practical applications.

The CDR Tool Technician Certification is the prerequisite to the CSI CDR 40-hour Analyst Course.

Use the attached registration form to reserve a seat in the course or contact JDEAssoc@gmail.com.

Payment is *required* 10 days prior to the start of the course unless prior arrangements have been made. Credit cards can be accepted with a small processing fee. Purchase orders are not accepted without prior arrangements. Course materials are distributed on a flash drive so a laptop or device capable of opening PDF files is highly suggested.
